

LAP1: Mobile Application Development Using C# - C971

Low Fidelity Framework Only

Luke Melton

7-7-2022

Version 1.0

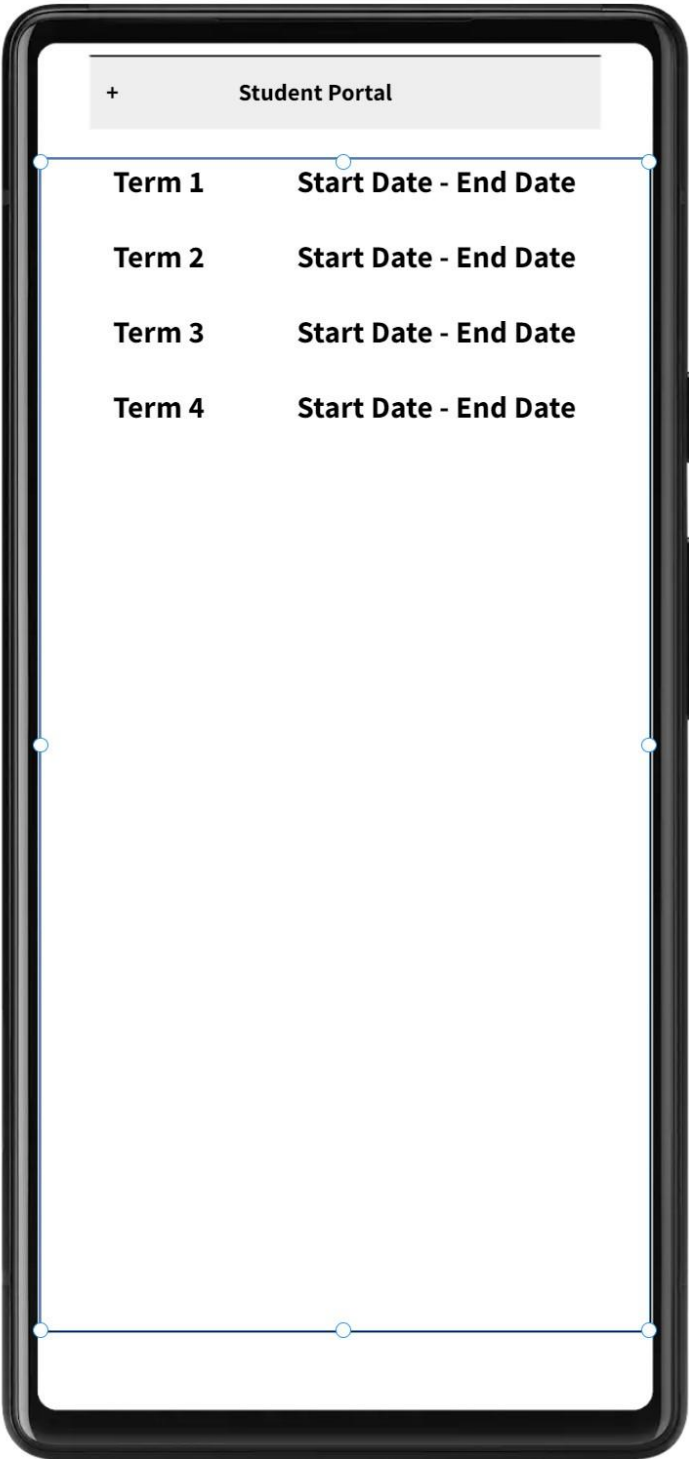

Changes made during development:

Not many changes were needed, the layout was able to use a minimalist style that was meant to show information clearly. The one design change I felt was necessary was changing to toolbar from being across the entire top to just a banner style.

I did both, the banner style for the *Mainpage* and *Course Detail* and the full toolbar for *Term Detail* and *Assessment* in the wireframe to see how it would look, I decided to go with the banner style as it compliments the overall minimalist approach as well as adding a more mobile look to the layout.
